

THE ULTIMATE CURRENCY

Apollo. Privacy Mission

Apollo is an all-in-one currency offering its users endless possibilities that go beyond making secure payments for goods and services. Apollo is a universal currency that can be tailored to use in almost every sector of life and business. From the creation of token shares for corporations, to the founding and management of highly secured decentralized organizations. The full potential of blockchain technology will be pushed to its limits within Apollo.

Coin Distribution Event

Unlike an ICO, Apollo is not simply an ERC20 token that was printed instantly. Apollo is its own cryptocurrency with many usable features and many new features being developed. This event was not set up with the goal of raising money for a project that had not been started. The only goal of the coin distribution event was to distribute Apollo into as many hands as possible, as quickly as possible.

SOLUTION

Olympus Protocol

- IP Masking
- Public and Private Transaction Options
- Integrated Decentralized Exchange
- Coin Shuffling
- Coin Mixing
- Private Ledger

Hermes Blockchain

- Sustainable Blockchain
- Lightning Fast Transactions

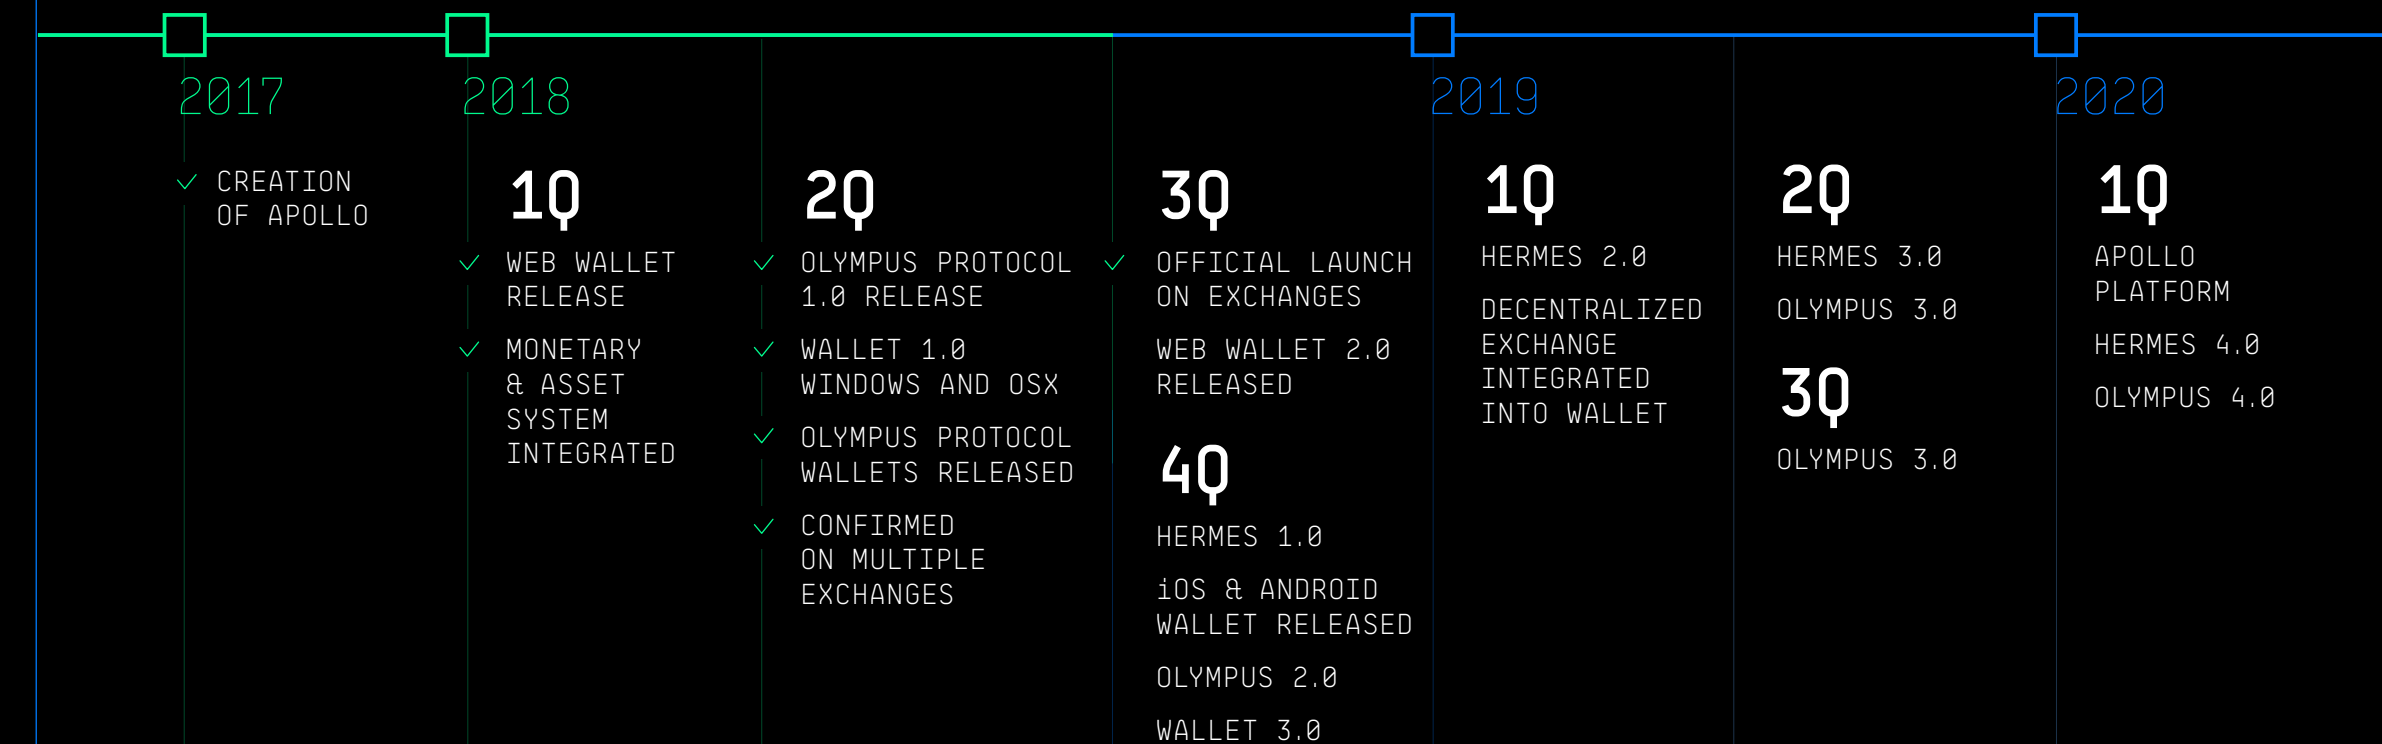

Current Features

- Asset System
- Encrypted Messaging
- Blockchain File Storage
- Alias System
- Voting System
- Phased Transaction
- Multi-Signature Accounts
- Decentralized Marketplace
- Advanced Account Control
- Authentication System
- Leasing
